

PRODUCT SPECIFICATION · FERTILIZERS

Muriate of Potash (MoP)

0-0-60
N-P-K₂O

By far the most widely used potassium fertilizer, containing 60% potash. Available in white and reddish crystalline form.

Potash (K ₂ O) 60% min.	Moisture 0.5% max.	Sodium as NaCl 3.5% max.	Packing 50 kg HDPE

Technical details

PARAMETER	SPECIFICATION
Moisture, % by weight	0.5% maximum
Water-soluble potash (as K ₂ O), % by weight	60% minimum
Sodium as NaCl, % by weight (dry basis)	3.5% maximum
Form	White or reddish crystalline
Packing	50 kg HDPE bag

Features and benefits

- Dissolves readily in water when applied to soil, where it ionizes into K and Cl ions.
- K is adsorbed on the soil complex, so although MoP is readily soluble in water, it is not leached.
- Its high nutrient concentration keeps packing, storage and transport costs per unit of nutrient very low.
- Suitable for all crops, both for basal application and top dressing; essential for healthy growth and better yields.

Packing

50 kg HDPE bags
